Filing Date: January 25, 2002
Title: Immunotherapy In HIV Infected Persons Using Vaccines After Multi-Drug Treatment

Page 2 Dkt: 1662.018US1

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of stimulating a HIV1-specific CD8⁺ response in a human infected with an HIV retrovirus said method comprising:

administering to the <u>a</u> human, an attenuated recombinant <u>NYVAC</u>, <u>ALVAC</u> or <u>MVA</u> pox virus, which enters the cells of the human and intracellularly produces HIV specific peptides for presentation on the cell's MHC class I molecules,

where said peptides are presented in an amount sufficient to stimulate HIV antigen-specific CD8+ and CD4+ proliferative responses, and

where said human is infected with an HIV1 retrovirus and

- i. has a viral load of less than 10,000 viral copies per ml of plasma and a CD4⁺ cell count of above 500 cells/ml, and
- ii. has been treated with one or more anti-viral agents, which contributed to a lower viral copy and higher CD4⁺ cell count than before treatment

where said HIV specific peptides consist of comprise HIV Gag, Gp120, Nef or Pol or Env peptides.

- 2. (Previously Presented) A method of claim 1 wherein the human has been treated with anti-viral agents, which resulted in the human having a viral load of less than 1,000 viral copies per ml of blood serum and a CD4⁺ cell count of above 500 cells/ml.
- 3. (Currently Amended) A method of claim $\underline{1}[2]$ wherein the anti-viral agents comprise a combination of protease inhibitors and inhibitors of reverse transcriptase.
- 4. (Canceled)
- 5. (Canceled)
- 6. (Canceled)

Title: Immunotherapy In HIV Infected Persons Using Vaccines After Multi-Drug Treatment

- 7. (Canceled)
- 8. (Canceled)
- 9. (Previously Presented) A method of claim 1 where the attenuated recombinant pox virus is administered a second time.
- 10. (Canceled)
- 11. (Canceled)
- 12. (Previously Presented) A method of claim 1 wherein the method further comprises administering an adjuvant.
- 13. (Original) A method of claim 1 further comprising administering interleukin 2 or CD40 ligand in an amount sufficient to potentiate the CD8⁺ response.
- 14. (Previously Presented) A method of claim 1 where the human has been infected with HIV and has demonstrated repeated and sustained proliferative T-cell responses to Gp120 envelope protein.
- 15. (Previously Presented) A method of claim 14 where the human has demonstrated repeated and sustained proliferative T-cell responses to p24 Gag antigen.
- 16. (Previously Presented) A method of claim 1 where the human is infected with HIV and is further tested by a skin test for a hypersensitive response to p24 Gag antigen.

Title: Immunotherapy In HIV Infected Persons Using Vaccines After Multi-Drug Treatment

- 17. (Previously Presented) A method of claim 1 where the human is infected with HIV and is further tested by a skin test for a hypersensitive response to Gp120 envelope antigen.
- 18. (Canceled)
- 19. (Canceled)
- 20. (Canceled)
- 21. (Currently Amended) The method of claim $\underline{1}$ [2], wherein anti-viral treatment is reduced or stopped after administering the recombinant virus.
- 22. (Currently Amended) The method of claim $\underline{1}$ [2], wherein anti-viral treatment is interrupted after administering the recombinant virus.
